

## Production of Super Boat Rollers for Boat Trailers

FD Plasttechnik dares to say that boat trailer rollers which have been designed and manufactured by FD Plasttechnik are amongst the best on the European market.

Taking the environment into account, we have used high-quality materials and technical solutions in our rollers, thanks to which the rollers comply with most boat owners' requirements. They want the rollers to run smoothly, to protect the boat as much as possible, to have an optimal design for their intended task and to have a long service life.

The rollers are made of high-quality TPE/ PP and PU/PA, which do not leave any black traces on the boat.

They are smooth-running rollers supplied with a churn (sleeve) throughout the keel roller's length of 200 mm. The small keel roller is 125 mm. All keel rollers have big wall thickness in order to ensure strength, stability and long service life.

The churn (sleeve) completes the keel roller's length and therefore acts as a spacer for the keel roller fitting, preventing damage to the soft top coating of the keel roller and reducing the friction on the steel sides of the fitting.

There is no steel tube in the keel roller which can get rusty or which can harm the environment. The middle diameter of the keel roller can be up to 70 mm. This way, the keel of the boat has a large contact face in order to prevent it from getting pressure marks or damages easily. The high edges of the keel roller make it easier to steer the keel of the boat when hauling up the boat trailer.

The side roller is designed so that it is automatically centre-aligned to the sides of the boat with an inclination of up to 30°. This feature coupled with the roller's large width of 80 mm and a diameter of 120 mm ensures a large and soft contact face on the side of the boat.

FD Plasttechnik has been manufacturing high-quality rollers for boat trailers for more than 15 years and they are both heat- and cold-resistant, without any deformations. All rollers are designed and manufactured in Denmark.

The quality of our rollers justifies their price and we believe that FD Plasttechnik's rollers and stern support can be an important factor for the customer to choose exactly your boat trailer.

Let us see what a test has to show

Kind regards,

FD Plasttechnik
